Independent accuracy and sensitivity checks
Gray bins are excluded, not interpolated
Plain MD: P=1 minus reference
RMS = 1.112 $k_BT$
Long MD + orientation MC: P=1 minus reference
RMS = 0.119 $k_BT$
Bead sensitivity: P=16 minus P=8
RMS = 0.193 $k_BT$
Timestep sensitivity: 0.05 fs minus 0.10 fs
RMS = 0.209 $k_BT$
$r_{HCl}$ (Å)
$r_{HBr}$ (Å)
Aligned difference ($k_BT$)
The upper panels use identical supported bins. Each comparison removes one additive constant. Bead and timestep differences include statistical noise.
