Biased-clock analysis on actual overdamped paths; static-bias engineering reference
Zero bias and gradient near the transition
U(x)
U(x) + static bias
Static bias
Audited transition region
Energy / kBT
x
128 independent paths per point; 95% intervals
Exact reflecting/absorbing MFPT
Mean first-passage time / model time
Unbiased dt=0.0005
Rescaled dt=0.0005
Unbiased dt=0.001
Rescaled dt=0.001
