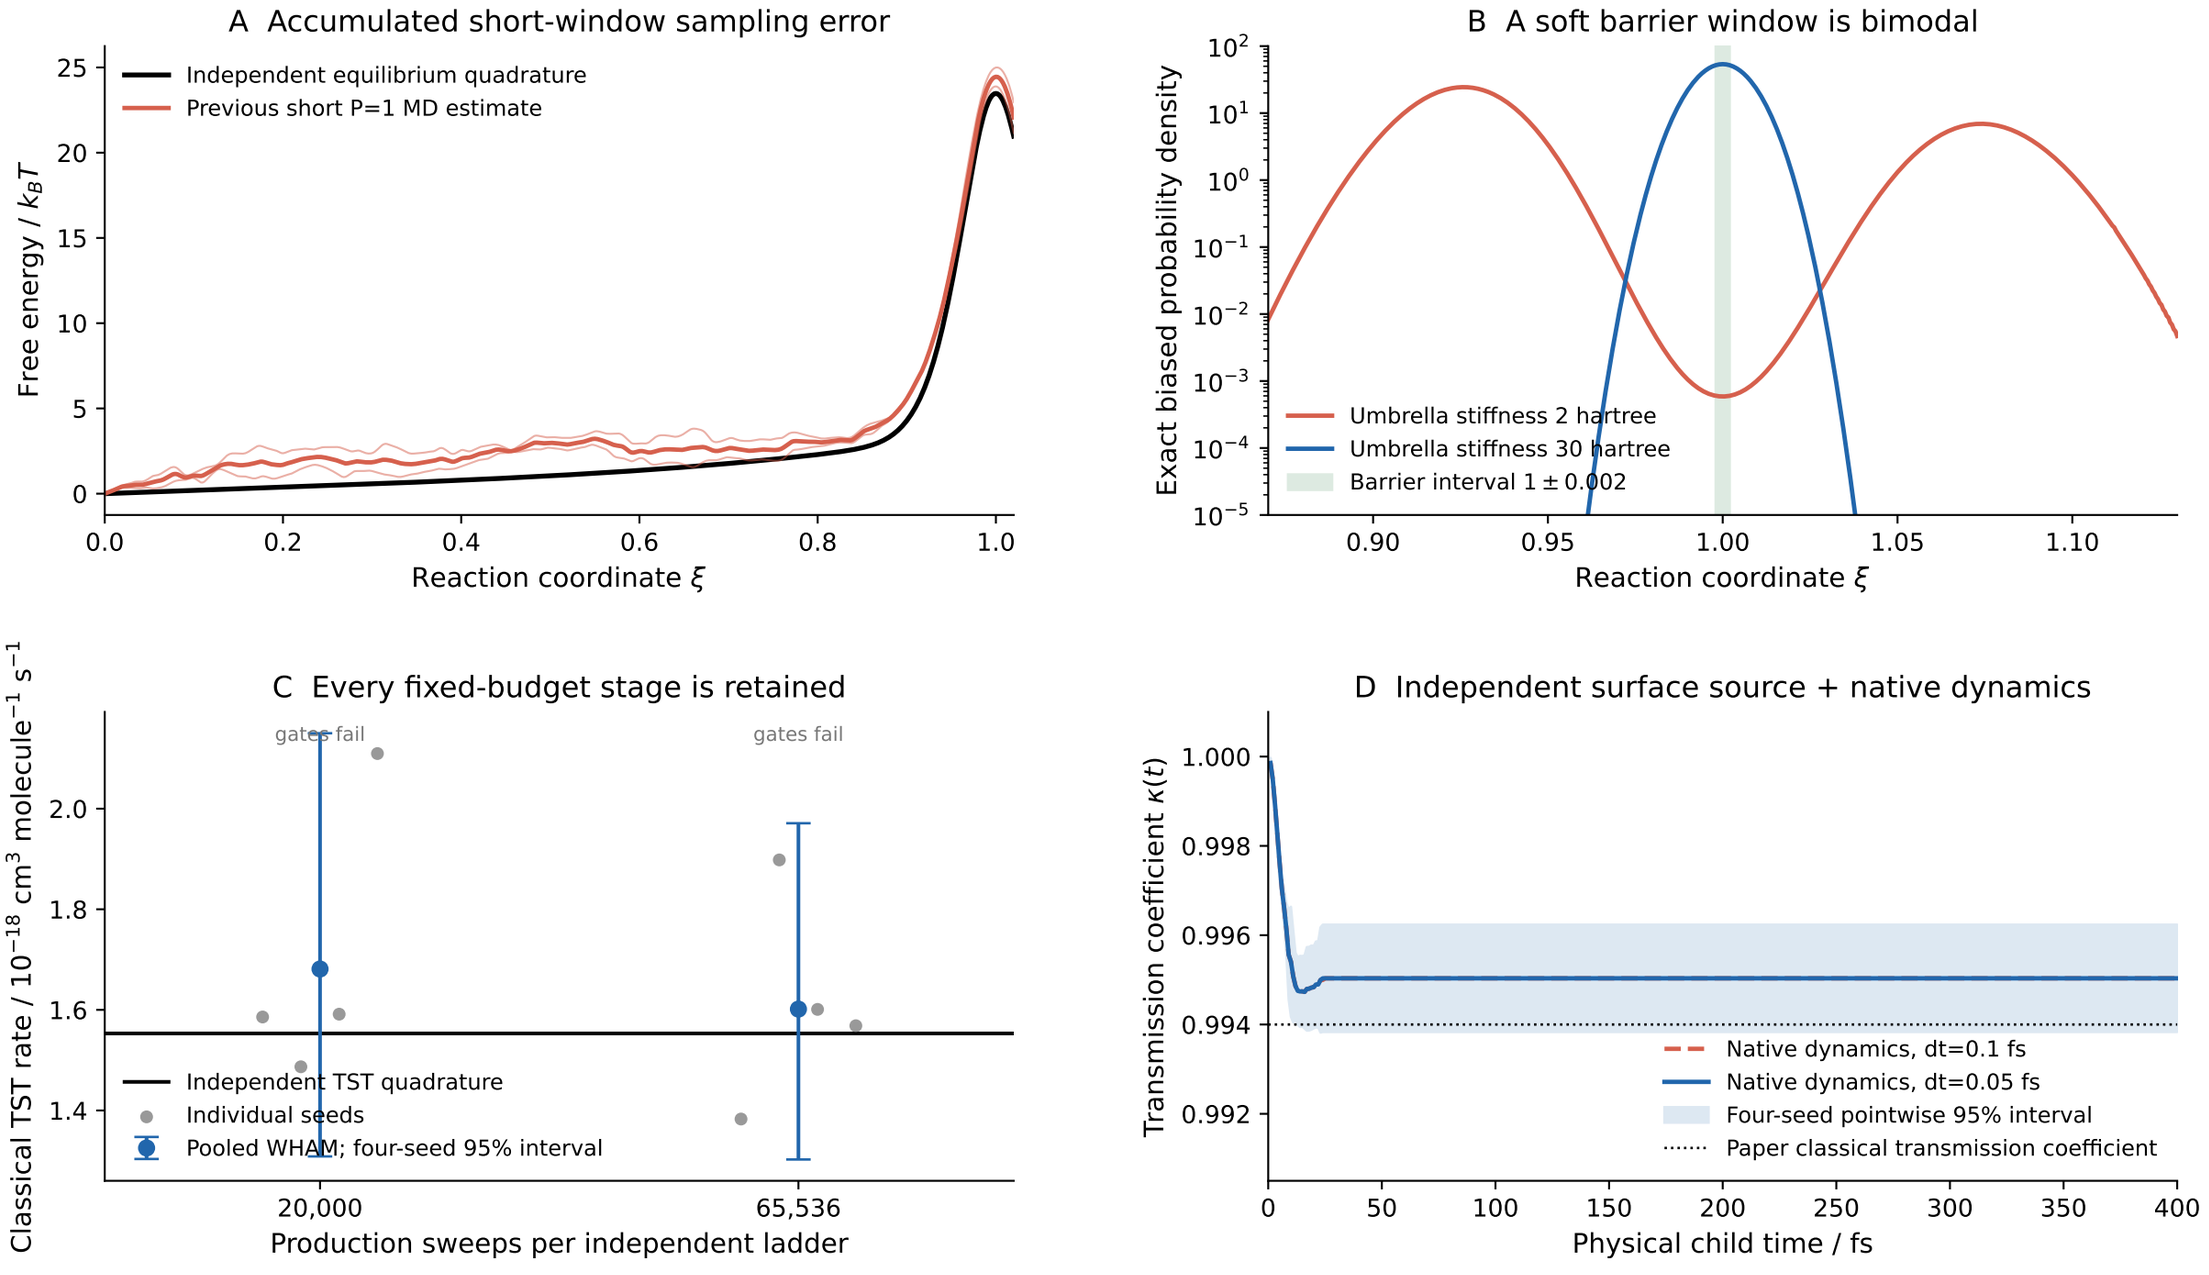
H + H₂ at 300 K on BKMP2: classical convergence and independent reference



Independent classical rate: 1.545406 [1.543541, 1.547272] × 10⁻¹⁸ cm³ molecule⁻¹ s⁻¹ (95%).
Paper: 1.55 × 10⁻¹⁸ with approximately 5% reported precision. Agreement is within paper precision;
the paper point is outside our smaller interval. This reference does not validate the umbrella or quantum result.
