PR #63 independent enhanced-sampling review
Equation checks and model-system evidence; no molecular-rate convergence claim
A. Full-ring CVs vs fourth-order finite differences
Max absolute derivative error
10^{-10}
6×10^{-11}
4×10^{-11}
3×10^{-11}
2×10^{-11}
Dihedral
Coordination
RMSD
Path (s,z)
B. OPES vs independent Gaussian-image sums
Max absolute error (atomic units)
Bias energy
Bias gradient
10^{-15}
6×10^{-16}
4×10^{-16}
3×10^{-16}
